

Redefining Early Cancer Interception

Are you ready to join the fight against cancer and improve the lives of millions of patients?
Do you want to work with machine learning technologies that will redefine medicine?
Join the Optellum team and help us shape the cancer care of tomorrow!

Technical Product Manager / Product Owner (Medical Software, AI)

Your Mission: Would you like to

- Bring to market AI solutions that will revolutionize cancer care in thousands of hospitals?
- Take ownership of delivering a pioneering medical product and having huge impact from Day One?
- Define the technical aspects of the product, writing clear user stories and software requirements?
- Work with the CTO and a crack team of prolific software developers within an iterative Agile process?

We are looking for people who:

- Are passionate, ready to take the initiative and own the delivery of their product.
- Have great analytical skills, a goal-oriented way of thinking and high attention to detail
- Are strong communicators and natural leaders, to interact with partners and clinicians - pilot customers.

Required: You must have

- A degree in a scientific, technical or a medical discipline (at least Master's level; PhD is a plus).
- Hands-on experience in software development.

Desirable: One or more of these would be a definite plus

- Agile software development experience.
- Familiarity with requirements analysis and verification & validation.
- Experience with development under ISO 13485, or similar Quality Management System.
- Experience in a product management, development or a business analyst role, ideally within a startup.

What We Offer

- Fast growth as one of first employees: full responsibility and freedom in determining your direction.
- Work with a world-class team of AI experts, and global leading clinicians- authors of medical guidelines.
- Competitive salary and benefits, including significant equity.
- Flexible working hours from the outset. Working location may be negotiable in the future.
- A great location based in Oxford's historical center and only 1h by train to central London.

Our Vision: Early Interception of Lung Disease

Optellum's vision is to redefine early interception of lung disease, by enabling every clinician, in every hospital, to manage their patients in the optimal way. Our first product is the world's first precision medicine software for early diagnosis & treatment of lung cancer, based on Artificial Intelligence & Machine Learning applied to the world's largest clinical dataset.

We are a team of world-leading medical imaging software, AI, and clinical experts who met at Oxford's world-renowned computer vision laboratory. Between us, we have track records of bringing innovation to market through over 10 start-up companies, resulting already in 5 trade-sales and one IPO. Learn more at <http://www.optellum.com/>.
